Today’s Plan: Stop Paying for Visits That End on the Deal Page

Seat Cover Solutions

A one-hour ad-account intervention · three switches that change tomorrow’s numbers

seatcoversolutions.com · October 14, 2026

PREPARED OCTOBER 14, 2026 · DATA THROUGH OCTOBER 13, 2026

The full analysis of 14 September – 13 October found the leaks; this document is today’s fix. Three switches in the ad account — one destination-URL change, one pause, one creative swap — about an hour in total. The latest week of data still shows all three leaks open, and none of them requires new creative, a rebuild, or a developer. The Site Opportunity Report carries the larger plays; nothing here duplicates that work.

> **Why these three and not the bigger ideas.** The mobile add-to-cart fix and the deal-page rebuild are worth more and take longer — they are the week’s work, queued in section 06. These three come first because tomorrow’s spend is committed tonight, and each of these settings stops a leak the day it is changed.

Contents

01 The Situation This Morning · 02 Action 1 — Re-point the deal-page ads to Home · 03 Action 2 — Pause the Meta campaigns that cannot convert · 04 Action 3 — Swap the tired creative on the largest Meta ad · 05 How to Read Tomorrow · 06 The Rest of the Week · A Data and Method

01 The Situation This Morning

The latest week — Monday 12 October through Tuesday 13 October, the window’s last two days — still shows the site buying traffic faster than it converts it. Orders for those two days ran at 175 for $63,906, and the steady channel is unchanged: Home (`/`) begins 86 of 145 entry-attributed orders while the paid channels run well below the site’s value per visit. Meta paid delivered $1.25 per visit in the latest week against $1.83 for the site overall, and that site figure is itself depressed by the bot wave running at 31–36% of raw traffic since 8 October.

Three leaks are open right now:

Leak	Latest reading	What it is worth
Paid ads land on `/pages/love-your-ride-deal`, the weakest large page	45 of 145 latest-week orders began there; the page converts entries at 0.74% against Home’s 1.32%	Up to about $130,000 a month re-pointed

Leak	Latest reading	What it is worth
Two Meta campaign groups spend with no return	`fb / paid / 120223108743890616`: 340 visits, 0 orders in the latest week, one order in 5,364 all window; `Main+Campaign^`: 261 visits, 0 orders in the latest week	Up to about $30,000 a month
The largest Meta creative is fatiguing	`120253974710140616` fell from 63 orders on 8,610 first-half visits to 34 on 7,042 second-half	Up to about $20,000 a month

Table 1 — The three live leaks, with the numbers as of the most recent week of tracked data. Sizes are monthly estimates from current volumes, not forecasts.

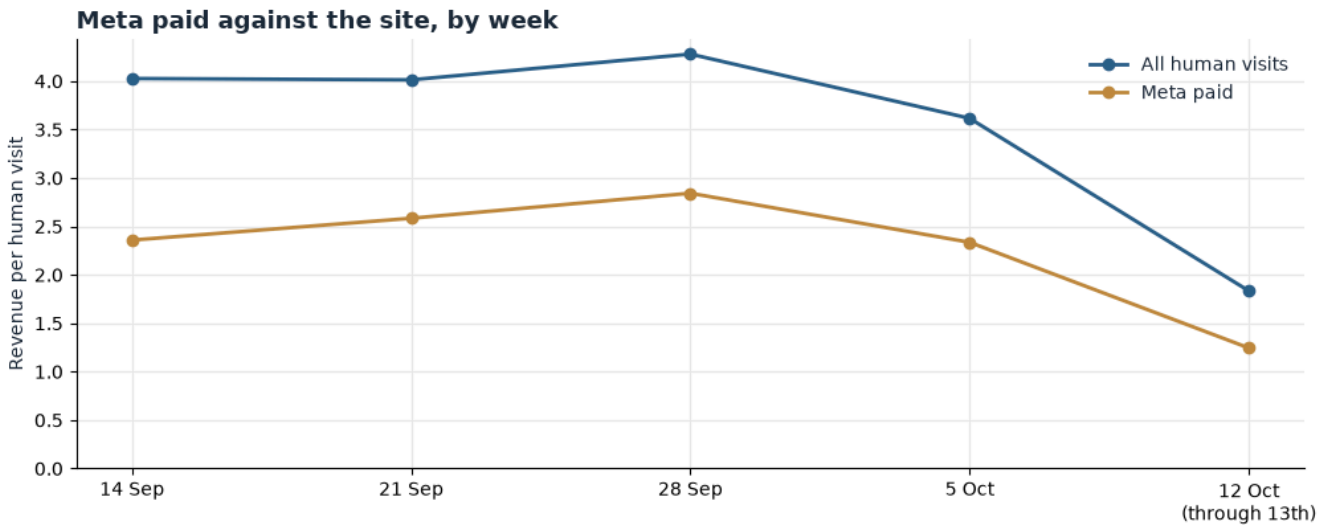

Figure 1 — On-site revenue per human visit by week, Meta paid against the site, 31 August – 13 October 2026. Meta paid ran $1.25 against the site's $1.83 in the two-day week of 12–13 October, and has stayed below the site line every week of the window.

02 Action 1 — Re-point the deal-page ads to Home

Owner: paid media. Time: about 20 minutes.

This one is first because it is the largest leak and it is purely a destination problem. Every day it waits, paid visits keep landing on a page that ends their session.

In Meta Ads Manager, find the active ads and campaigns whose landing page is `/pages/love-your-ride-deal` and change the destination URL to `/`. Do not pause the campaigns — the audiences are fine; the page is the leak. Leave the organic and email links untouched; they are not the waste. Half the change is the read: once the URLs are flipped, the deal page's paid traffic lands on Home, which converts entries at 1.32% against the deal page's 0.74%.

Expected result: if paid and social links account for half the deal page's entries — roughly 60,000 visits a month — and re-pointed visits convert like Home's existing traffic, the gap between 0.74% and 1.32% is up to about $130,000 a month. That is an upper bound, not a forecast; it assumes re-pointed visitors behave like Home's current visitors and the page rebuild in section 06 is still needed.

03 Action 2 — Pause the Meta campaigns that cannot convert

Owner: paid media. Time: about 15 minutes.

The campaign `fb / paid / 120223108743890616` spent 5,364 visits across the window to produce one order — $0.08 of on-site revenue per visit. It is still spending: 340 visits and zero orders in the two days of 12–13 October. Beside it, every `Main+Campaign^` variant (facebook, instagram, audience network, paid and paid_social) has run at zero orders for two consecutive weeks — 1,068 visits in the week of 5 October and 261 more in the latest week, none of them converting.

Pause both: campaign `120223108743890616`, and every ad set carrying the `Main+Campaign^` name. Do not re-point them; two weeks of zero orders on combined audiences says the creative-destination pair is wrong, not the audience, so re-pointing spends the same money to learn the same lesson. If budget must stay in-market, move it onto campaign `120254067922820616`, the strongest large line at $3.78 per visit all window.

Expected result: the two groups cost roughly 8,000 visits a month that today produce on the order of $0.08–$0.80 per visit. Moved to pages and campaigns converting at $2.40–$4.90, that is up to about $30,000 a month, an upper bound that assumes the reallocated spend performs like the destination lines' existing traffic. The cost-per-order check sits in Ads Manager; ad spend is not in this data.

04 Action 3 — Swap the tired creative on the largest Meta ad

Owner: paid media. Time: about 20 minutes.

The largest creative in the account, `120253974710140616`, is sliding: 63 orders from 8,610 visits in the first half of the window, 34 from 7,042 in the second half — conversion of 0.73% down to 0.48%. Campaign-level numbers held, so this is fatigue on one ad, not a broken campaign, which makes it a swap, not a rebuild.

In Ads Manager, replace creative `120253974710140616` in campaign `120253644899970616` with a refreshed version — new first frame, rotated image — or swap in the best-performing creative already running in that campaign. Do not touch the campaign's audiences, budget, or destination; the slide is the creative's, and changing three things at once makes tomorrow's read worthless.

Expected result: restoring the first-half rate of 0.73% on the creative's current ~7,000 visits a half-month is about 29 more orders a month — up to about $20,000 a month at the window's average order, an upper bound that assumes the refreshed creative performs like this same creative did in September rather than like a genuinely new ad.

05 How to Read Tomorrow

Direction should be visible the day after each switch: paused campaigns stop spending immediately, and the re-pointed ads report against Home from their first click. Size needs three or four days on a site this large — about 12,000 human visits a day — because one order still moves these rates:

- One order on the deal page's ~4,000 daily entries moves its entry-buyer rate by about 0.025 points.
- One order on the swapped creative's ~470 weekly visits moves its conversion by about 0.2 points.
- One $420 order on the ~10,700 weekly Meta link visits moves Meta's revenue per visit by about $0.04.

Watch	Now	Target
Deal-page entry-buyer rate	0.74% of window entries	1.0% first, then 1.2%
Meta link-channel revenue per visit	$2.39 window · $1.24 latest week	Hold at or above $2.40
Visits to the paused campaigns	340 + 261 in the latest week	Zero from tomorrow
Creative `120253974710140616` conversion	0.48% (second half)	Back to 0.7% or better

Two cautions sit beside these numbers. A promotion, drop, or restock landing inside the reading window moves orders on its own — 1, 4 and 10 October each carried a cross-channel lift the bundle cannot attribute to a named offer — so note any send or code beside the daily figures before crediting the switches. And the bot wave makes the latest week's reads soft: dead sessions ran at 31–36% of raw traffic from 8 October onward, so treat the 12–13 October revenue-per-visit figures as directional until the dead share returns near 16%.

06 The Rest of the Week

These are deliberately not today's work. They are the larger plays from the Site Opportunity Report, queued once the three switches are on.

When	Action	Size
Tue	Add UTM tags to the untagged Meta links (25,436 window visits arrive with no medium or campaign) and to every Klaviyo flow link	Protects the reading of every action above
Wed	Ship the sticky add-to-cart on mobile product templates; close the 8.2% against 17.7% add-to-cart gap	Up to about $300,000 a month
Thu	Put the fitment finder first on mobile Home; cut what competes with it above the fold	Up to about $50,000 a month
Fri	Rebuild `/pages/love-your-ride-deal` with the finder	Up to about $200,000 · $100,000 a month

When	Action	Size
	embedded; extend browse-recovery flows to mobile	

Cart recovery, the attach step past $500, and the repeat-buyer programme stay in the Site Opportunity Report's 30-day plan; none of them is a same-day switch.

A Data and Method

Window. Orders and visits 14 September – 13 October 2026; the last day of the report window is 13 October 2026, with 31 August – 13 September as pre-window context. Weeks start Monday. "Latest week" is the two-day week of Monday 12 October through Tuesday 13 October; its order count (175, $63,906) is two days against five in full weeks, and 13 October itself shows 19 orders against 156 on 12 October, so week-on-week comparisons against it are directional.

Dead sessions. A visit with one pageview or none, no click, no scroll and no order is excluded from visit tables and counted as a dead session: 99,212 in the window, 21.4% of raw traffic, rising to 31–36% of raw traffic on 8–13 October. A visit with an add to cart, a checkout start or an order is never excluded. The bot wave inflates visit denominators in the final week and depresses every rate built on them.

Attribution and sizes. Channel is last touch: the link the visit arrived on. Ad spend is not in the bundle, so revenue per visit is on-site value only and no profit claim is made. Buyers are counted by device. Every monthly dollar figure here is an upper bound estimated from this window's volumes, not a forecast; each action states the behaviour its bound assumes.

Data gaps. 622 window orders (14.4%) matched no tracked visit and carry no channel or entry context. There is no confirmed promotion calendar, so the 1, 4 and 10 October peaks cannot be tied to a named offer. Campaign and creative rows carry their names as they appear in the bundle. The weekly Meta chart (Figure 1) was drawn from the visit-level tables; no other chart was scheduled for this document.
